COIN of the YEAR

Celebrating Three Decades of the Best in Coin Design and Craftsmanship

DONALD SCARINCI
COIN
of the YEAR
Celebrating Three Decades of the Best in Coin Design and Craftsmanship
INTRODUCTION
A Celebration of Achievement

By Donald Scarinci

An award for excellence in coinage design first issued in 1984 by Krause Publications in Iola, Wisconsin, has become the ultimate international recognition of mints and their artists, growing into the community’s most coveted award for contemporary world coins.

Today, artists and mints worldwide openly compete for one of the Krause Coin of the Year categories. The announcement of the Coin of the Year is one of the highlights of the annual World Money Fair, and the winner is internationally celebrated. Any remaining mintage of the winner quickly sells out and coin values rise dramatically on the secondary market. This is, indeed, solid evidence of the global acceptance, standing and success of the annual award.

The Coin of the Year Award had a humble origin as a pet project of Krause Publications’ founder Chester “Chet” Krause and former Krause Publications’ President and CEO Clifford “Cliff” Mishler. By highlighting medallic art with merit, Mishler hoped to encourage world mints to improve the art of coins. Few could have imagined how the brainchild of these two pioneering men would be so well received today.

An international panel of judges nominates and votes for coins in each category. Category winners then compete for the grand prize—the Krause Coin of the Year.

The first award in 1984 began a tradition of honoring coins that were minted two years prior to the ceremony. Thus, the inaugural Coin of the Year went to the United States Mint for Elizabeth Jones’ 1982 design of the George Washington Commemorative half dollar. This inspiring design, commemorating the 250th anniversary of the birth of George Washington, was the first commemorative coin issued in the United States since 1954, when the previous program was suspended.

The United States and Canada were the first winners, causing concern that the award would be myopic in focus, gazing only at the design work done in North America. Those fears were set aside when Finland won the award in 1987 for its 1985 design, “Kalevala National Epic.” This was the first time a coin with what could be considered a modernist design was selected for international recognition by the Krause judges.

By 1990, with the Coin of the Year going to Albania for its 1988 dated silver 50-Leke “Railroads” design, the prestigious award began to gain acceptance as an international award. The 50-Leke is a five-ounce silver round with a piercing that invites the viewer to follow the path of a train as it goes through a tunnel. With the coin’s selection, the Krause judges made
it clear they viewed coins as three-dimensional objects, not merely pretty pictures on metal. The award to Albania in 1990 validated the Coin of the Year as a truly international award of merit for innovation and artistic excellence in world coins.

When the award began, an overall Coin of the Year was selected as well as six category winners: Most Popular; Most Historically Significant; Most Artistic; Best Gold Coin; Best Silver Coin; and Best Crown. Through the years, as the competition evolved, other categories were added – and some removed – to bring the total number of judged categories to ten. The later categories were: Most Inspirational; Best Contemporary Event (defined as an event within the last 100 years); Most Innovative; Best Bi-Metallic; and Best Circulating.

As interest in the Coin of the Year has surged, a fascinating offshoot of the program has emerged – collecting the winning coins. I’ve found collecting Coin of the Year coins a rewarding experience. Assembling a collection of the main winners is challenging enough to be fun; but, with the exception of the gold and platinum issues, the winning coins are not excessively expensive to collect. Some have small mintages, but that does not translate into big price tags.

Selecting a category like Most Historical, where Krause defines “historical” as the passage of at least 100 years, is like taking a survey class in world history from the point of view of the coin-issuing country. A coin like the 1986 dated Austria 500-Schilling, commemorating the 500th anniversary of the first dollar with a set of coins from each of the six current mints, is a wonderful gateway to study the origin and history of the dollar denomination around the world.

A quick scan of the topics chosen by coin-issuing authorities expands your perception of what a country considers to be its important events, or of its contributions to the world, such as the 1995 German 10 Mark commemorative for the 100th anniversary of the X-ray. The 2003 Australia silver 10 Dollar “Evolution of the Alphabet” coin is a fascinating piece and a wonderfully curious subject for that country to choose.

A collection of the Most Inspirational would begin with the 1993 Poland 300,000 Zlotych, which marked the Warsaw Ghetto Uprising. The coins that have received this award range from the 1996 Paralympics silver dollar from the United States to the 2006 Pink Ribbon 25-cent coin from the Royal Canadian Mint, struck to raise breast cancer awareness.

The Best Contemporary Event category, added in 1996 with the award for the 1994 United Kingdom 50 Pence commemorating the 50th Anniversary of the Invasion of Normandy, is a wonderful way to study more modern history. These coins remind us of the ancient Greek and Roman practice of using coins as the newspapers of their day, communicating a message or persuading the public of the benefit of a leader, event or building.
A collection of these coins includes subjects ranging from the 1997 South Africa 1 Rand honoring the first heart transplant to the 2000 German 10 Mark celebrating the 10th Anniversary of the German reunification. These coins are as interesting for their designs as they are for the topics they commemorate.

Perhaps my favorite category is Most Innovative. As a group, these coins show the modern history of technological innovations in the process of making coins. The first coin in the Most Innovative category was the 1988 Albania 50 Leke, a large coin commemorating railroads. This large, impressive coin featured a piercing to represent part of a tunnel, a radical departure and advancement of coin design. A collection of these coins shows the evolution of minting technology and the willingness of world mints to experiment. They include coins on planchets that are not flat, like the 2001 France 1 Franc coin, and coins with non-metallic substances, like the 2009 British Indian Ocean Territory’s 2 Pounds “Life of the Turtle.”

A quick scan through the images in this book reveals the richness and diversity of medallic art spanning the last quarter century. In the early 1980s, Cliff Mishler and Chet Krause could not have anticipated that the dramatic embrace of modernism in medallic art that began at the end of WWII would become accepted as the norm on circulating world coin designs. The coins illustrated throughout this book are exceptional examples of the evolution of world coin design and provide a permanent record of the art of coins for this period.

Since ancient times, the artisans who created coins used in commerce were artists whose technique was ever evolving, carefully studied and appreciated as much as the monumental works in public squares and buildings. It is well known today that the most widely reproduced works of arts in the world are not housed in museums, but rather sit in the hands of commerce. Countless millions of Victor David Brenner’s 1909 depiction of Abraham Lincoln have been appreciated and recognized around the world by countless millions of people. It is not “just a coin.” It is a work of art.

The pages of this book present a contemporary history of the world and a history of contemporary art. Most of the coins remain available and affordable. A collection of coins in any one of the categories makes an attractive visual display, providing hours of fun and learning.

As a member of the U.S. Citizens Coinage Advisory Committee, I have hope that the many beautiful coin designs produced around the world will inspire American artists. Recent developments within the United States Mint are beginning to show a willingness to explore techniques like reverse proof, concave coins, and even higher relief. This is indeed an exciting time in numismatics and we owe a debt to Cliff Mishler, Chet Krause and all of the people who make the Krause Coin of the Year possible.
1984
AWARDS

FOR COINS MINTED IN 1982
COIN OF THE YEAR
United States, 50-Cent, Silver, 250th Anniversary of the Birth of George Washington

It is fitting that the first coin selected as the Coin of the Year for the new award program was the first United States commemorative coin issued by the United States Mint since 1954. It won in both the Most Popular and the Most Historically Significant categories as well.

The coin theme selected to restart the United States commemorative coin program after a 28-year hiatus was the 250th anniversary of the birth of President George Washington. The task of designing the obverse and the reverse of this coin was assigned to Elizabeth Jones, Chief Sculptor and Engraver of the United States Mint.

The obverse bears the image of Washington on horseback wearing his uniform as General of the Continental Army. The image is cropped to allow Washington to appear prominently centered and seated erect as the curves in the horse flow with the curve of the coin and the horse’s head occupies the right field to balance the word “Liberty” on the left.

The reverse depicts Mount Vernon, home of George and Martha Washington and the place where the President Washington was said to love more than any other place. Jones again uses the sloping landscape of Mount Vernon to create a slight curve at the bottom third of the design. The low angle creates the right perspective for one of the nicest depictions of buildings on coins ever created by a United States Mint artist.

Since the United States Mint had been out of the commemorative coin market for a long time and since the subject involved the most important man in the history of the United States, Congress authorized a maximum mintage of 10 million coins; 4,894,044 were actually minted. The Proof coins were manufactured at the San Francisco Mint and the uncirculated coins were made in Philadelphia.

While these coins are considered common, the Denver Mint State coins in MS69 are extremely rare and MS70 examples exist only in theory. The Proof coins, as usual with United States coins, are available and can be found in Proof-69 and Proof-70.
MOST HISTORICALLY SIGNIFICANT, MOST POPULAR
United States, 50-Cent, Silver, 250th Anniversary of the Birth of George Washington

MOST ARTISTIC, BEST GOLD
Canada, 100-Dollar, Gold, New Constitution 1982
BEST SILVER
Panama, 20-Balboa, Silver, *Balboa’s Discovery of the Pacific Ocean*

BEST CROWN
China, 20-Yuan, Silver, *Year of the Dog*
1985 AWARDS

FOR COINS MINTED IN 1983
The United States issued three coins to commemorate the Games of the XXIII Olympiad in Los Angeles, California. The first of the three coins, and only the second dollar denomination commemorative coin ever issued by the United States Mint, received the Coin of the Year Award for coins dated 1983. It also won the award for Most Popular Coin and Best Crown.

The discus throw lays claim to one of the events of the ancient pentathlon dating back to at least 700 B.C. The perfect form of the athlete coiled to make the throw is an image long associated with the Olympics. It was an appropriate choice to celebrate the 1984 Summer Olympics in Los Angeles, which also hosted the games in 1932.

The obverse design of a discus thrower was inspired by the ancient work of the sculptor Myron. Elizabeth Jones, the Chief Sculptor and Engraver of the United States Mint at the time, depicted the ancient art in a new and modern way by using a sculptural blur effect to show motion. The athlete is outlined twice and appears balanced toward the left of center with the Summer Olympic logo, also outlined twice on both sides in the right obverse field.

Jones depicts the bust of an eagle on the reverse. The eagle’s head appears bold and proud against the inner ring containing the legend.

Congress optimistically authorized a maximum mintage of 50 Million coins for the three-coin set. Less than 1.2 million coins of all three coins in the set were sold. The 1983 silver dollar was by far the most popular of the three, accounting for more than half of the mintage of the set.

The uncirculated version of the 1983 Discus Thrower was minted in both Philadelphia and Denver. Proof versions were minted in San Francisco. None are particularly hard to find in high grades of MS69 or Proof-69.
MOST HISTORICALLY SIGNIFICANT
China, 5-Yuan, Silver, *Marco Polo*

MOST POPULAR, BEST CROWN
United States, 1 Dollar, Silver, *Olympics Discus Thrower*

China, 100-Yuan, Gold, *Panda*

BEST SILVER
China, 10-Yuan, Silver, *Panda and Cub*
1986
AWARDS

FOR COINS MINTED IN 1984
The Canadian $100 gold commemorative coin honoring the 450th anniversary of Jacques Cartier’s Voyage of Discovery won the Coin of the Year Award for coins dated 1984, becoming the first international winner. The judges also selected it as the winner in the Most Historically Significant coin. The impressive Canadian coin also tied with the Isle of Mann’s first bullion gold coin for Best Gold Coin.

Canada’s Cartier coin is part of a series of gold commemoratives. This one commemorates Jacques Cartier’s landing at Gaspe Peninsula in Quebec. On April 20, 1534, Cartier set sail to “discover certain islands and lands where it is said that a great quantity of gold and other precious things are to be found.” After some exploring in Newfoundland, he landed in Gaspe Bay and on July 24, 1534, he claimed the territory in the name of the King of France. This and his subsequent adventures solidified the French claims to the St. Lawrence Seaway.

The Royal Canadian Mint held a competition to design this coin. Carola Tietz design was chosen over about 60 competitors. Unlike Elizabeth Jones at the United States Mint, Tietz had only designed two previous coins for the Canadian Mint. She designed the 1979 “Year of the Child” gold coin and a 1983 silver dollar commemorating the World University games in Edmonton. Walter Ott engraved the coin.

The obverse of the coin shows the portrait of Elizabeth II designed by A. Machin. The security lettering used on the edge of coins in 1983 was not continued in 1984.

The Royal Canadian Mint displayed the coin at the opening of the Canada Pavilion during the 1984 Expo in Quebec and it was made available for sale to the public shortly thereafter. The Cartier commemorative 22kt gold coin exists only in proof. A total of 67,662 were minted so they are not terribly scarce in high grades up to MS69.
MOST HISTORICALLY SIGNIFICANT
France, 100-Franc, Gold, Two Time Nobel Prize Winner Marie Curie

MOST HISTORICALLY SIGNIFICANT, BEST GOLD
Canada, 100-Dollar, Gold, 450th Anniversary of Jacques Cartier’s Voyage of Discovery
MOST POPULAR
United States, 1 Dollar, Silver, *XXIII Olympic Games in Los Angeles, California*

MOST ARTISTIC, BEST SILVER
Panama, 20-Balboa, Silver, *Balboa Discovers the Pacific Ocean*
BEST GOLD
Isle of Man, 1 Angel, Gold, *Archangel Michael Slaying the Dragon*

BEST CROWN
Barbados, 10-Dollar, Silver, *Three Dolphins*
1987 AWARDS

FOR COINS MINTED IN 1985
In addition to being named Coin of the Year, this remarkable offering from Finland won awards in three categories for coins dated 1985: Best Silver, Best Crown and Most Artistic.

Finland had broken the pictorial barrier on coin designs as early as the 1960s with coins like the 10-Markkaa honoring its 50th Anniversary of Independence (KM50) and other coins. However, the acknowledgement by the international community, including the still heavily weighted North American Coin of the Year jury panel, signaled an evolution in aesthetic preferences favoring a more abstract coin design.

The coin celebrates the 150th anniversary of the Kalevala, the Finnish national epic. This poem was part of the Finnish oral tradition for over 2,000 years. In 1835, Elias Lonnrot edited the poem and published it for the first time along with other epic poems in the Balto-Finnic language.

The obverse of the coin depicts trees reflected in the water of the Finnish countryside. The reverse depicts the hero of the epic poem standing amidst stylized waves.

Just as the publication of the Kalevala brought Finnish language and culture to the attention of the European community when it was published in 1835, this coin brought attention to Finnishmedallic art and coin design to the world community for the first time in 1987.

Reijo Paavilainen and Tapio Nevalainen designed the coin. Paavilainen has been a member of The Guild of Medallic Art in Finland and has had the honor of designing several of their annual medals. His medallic art is a part of the permanent display at the Tampere Art Museum.

With its mintage of 300,000, this coin is relatively available, although grades above MS65 are scarce. The coin carries a privy mark, P-N, which probably stands for the designer and sculptor. No proof version was struck.
MOST HISTORICALLY SIGNIFICANT (TIED)
Austria, 500-Schilling, Silver, 2000th Anniversary of Bregenz

Finland, 50-Markkaa, Silver, *Kalevala National Epic*

BEST TRADE
Australia, 1 Dollar, Copper-Aluminum-Nickel, *Kangaroos*
1988

AWARDS

FOR COINS MINTED IN 1986
The United States Congress authorized the first $5 gold coin since 1929 to honor the 100th Anniversary of the gift from France of the Statue of Liberty. It won the award for Most Popular Coin and became an obvious choice for Coin of the Year for coins dated 1986.

This was the third time in five years that the United States Mint took top honors. It was also the third time the Coin of the Year was awarded to a coin designed by Elizabeth Jones. The only woman to serve as Chief Engraver at the United States Mint, Jones is the only designer to receive the highest honor for her work three times. Jones served the U.S. Mint with distinction from 1981 to 1990.

For the United States, this would be the last Coin of the Year award until 2002. Criticism of the program having a North American prejudice was growing by 1988, something award founder Chester “Chet” Krause was aware of and feared would damage the goal of the program. Mr. Krause took steps to re-organize the judging process and in doing so secured the status of the Coin of the Year award as a truly international award of honor.

Both the proof and mint state versions of the gold coin were minted at the West Point Mint and bear the “W” mint mark. These were the first gold coins produced at West Point which would later be used to strike the American Gold Eagle coin series and other precious metal United States coins.

These coins were sold individually and as sets. Like many of the early modern United States commemoratives, the mintage was high with 95,248 sold. They are reasonably available in high grades of MS69 and Proof-69.
MOST HISTORICALLY SIGNIFICANT

AWARDS

FOR COINS MINTED IN 1987
It was a memorable year for the British Royal Mint. The Mint’s 100-Pound gold Britannia, minted in 1987, was named not only the Coin of the Year but also the Best Gold Coin and Most Artistic Coin. It was an auspicious beginning for the first year of the British Royal Mint’s gold bullion program.

The figure of a seated Britannia first appeared on the coins of the Roman Emperors. It was not until Charles II that the image was resurrected and placed on the coins of Great Britain. After decimalization of English coins, the seated Britannia was chosen to appear on the 50 Pence.

When the decision was made to issue international bullion gold, the figure of Britannia was a logical choice of an easily identifiable national image. Philip Nathan’s design of a standing Britannia was ultimately selected for the new gold bullion coins.

The image of Britannia had always been portrayed seated until 1901 when the standing figure was used on the British trade dollars. In 1902 the standing Britannia was used on the Florins of Edward VII. Nathan adopted the standing Britannia. His Britannia holds a shield and an olive branch in one hand and a trident in the other. The draped figure glides on the ocean waves. The flowing gown suggests the movement of the ocean waves while the helmet and majesty of the standing figure depict the pride and power of the island nation and its dominance in the world.

The Britannia gold bullion coins were issued in four denominations: 100-Pound one ounce; 50-Pound half ounce; 25-Pound ¼ ounce; and the 10-Pound ¼₀ ounce. All coins were issued in proof with a limited mintage and in uncirculated bullion with unlimited mintages. 13,000 proof one-ounce coins were minted.

1990

AWARDS

FOR COINS MINTED IN 1988
A new category called Most Innovative Coin Concept was introduced in 1990. As one of the first modern coins with a piercing, the Albania 50-Leke, Railroads, was an obvious winner in that category and it went on to gain support as the Coin of the Year.

This five-ounce silver coin minted in 1988 was the first oversized coin to win the award. The coin’s diameter is 65 mm. The piercing is part of the design element that helps add a fourth dimension—time—to an otherwise three dimensional object. The train appears to come through the piercing which is the tunnel.

The obverse shows a steam locomotive and passenger train emerging from a tunnel. The reverse shows the train exiting the tunnel. Flipping the coin from obverse to reverse creates the illusion of the passage of time. This technique had been used previously in medallion art, however this is the first time the technique had been used effectively on a coin.

The coin was issued to commemorate the 42nd anniversary of Albanian railroads but in the broader sense commemorated the importance of rail in Albania. It was issued in proof only. However, the same design without the piercing was issued as a 5-Leke 38.7 copper-nickel coin, KM#61 for circulation. No proof of the smaller coin was made.

While the 50-Leke brings a premium over its silver content and is not often seen on the market, 7,500 were minted. While it is not a particularly rare coin, its absence from dealer trays is a testament to its popularity.

AWARDS

FOR COINS MINTED IN 1989
COIN OF THE YEAR
France, 5-Franc, Cupronickel, *Eiffel Tower*

The symbol of Paris and of France, the Eiffel Tower is one of the best-known monuments in the world. It is no surprise then that the coin commemorating the Tower’s centennial would be the darling of the 1991 Awards. The French entry won honors as Best Trade, Most Popular and Most Artistic coin on its way to being named Coin of the Year.

Once described as “a vision, an object, a symbol, the Tower is anything that Man wants it to be, and this in infinite,” work on the Eiffel Tower began in 1887. Gustave Eiffel built the tower for the 1889 Exposition Universelle, which was to celebrate the 100th anniversary of the French Revolution. Its construction was a technical and architectural achievement, a symbol of technological prowess at the end of the 19th century.

In addition to this coin, a painting reflecting its 100-year history commemorated the Eiffel Tower in 1989. The painting was unveiled in a location near the tower. The coin’s obverse, designed by F. Joubert, features a unique perspective of the Eiffel tower as if taken with a wide-angle lens from beneath a supporting beam. The curve of the beam and the slant of the tower are rounded by the perspective to fill the planchet. The lettering on the right balances the image.

The reverse was designed by J. Jimenez and shows the tower from the bottom looking up. The denomination is stamped on the bottom of the inverted tower at the top half of the coin to provide balance to the image of the tower on the bottom half.

This is the first coin to receive the award that was struck in different alloys, but the copper nickel coin is the one the judges considered. The following metal varieties are available:

- KM968 Copper Nickel (Unc) 9,774,000 minted
- KM968a Silver (proof) 80,000 minted
- KM968b gold (proof) 30,000 minted
- KM968c platinum (proof) 1200 exist
- Piefort in platinum with only 10 made
- Essais in nickel in unknown quantity

While the platinum and the piefort versions are scarce, the copper nickel variety appears with some frequency.

FOR COINS MINTED IN 1990
COIN OF THE YEAR
Isle of Mann, 1 Crown, Cupronickel, *Penny Black*

One of the first coins to commemorate a stamp and to feature a stamp as its main design element won the Coin of the Year Award for coins dated 1990. This unique coin also won Best Crown and Most Innovative coin concept in the competition.

This Pobjoy Mint item commemorated the 150th anniversary of the world’s first adhesive postage stamp. Known to stamp collectors as the “Penny Black,” this stamp was the cornerstone to the reform of the British postal system. The stamp design is widely known in the stamp collecting community to all collectors and is based on a graphic design by famed engraver William Wyon.

One might say that the “Penny Black” was the forerunner of modern stamps. Prior to its issuance postage was paid on the delivery of a letter. Some marking was made on the envelope to indicate the price. Shortly after this stamp was issued, the adhesive postage stamp was adopted by country after country and became the standard everywhere in as little as two decades. The adhesive stamp is still used around the world.

This coin was minted in different alloys and in both proof and mint state. It came in various packaging options as well because the coin had an obvious appeal to the collector community reaching into the philatelic community. The copper nickel coin was the one considered by the Krause judges. A list of the other coin options:

- KM 267 Copper Nickel unc
- KM 267 Copper Nickel Proof 50,000 minted
- KM 267a Silver Proof 30,000 minted
- KM 267b Gold Proof 1,000 minted

AWARDS

FOR COINS MINTED IN 1991
The coin dated 1991 that was voted Most Artistic Coin was also voted Krause Coin of the Year for that year. It commemorates the 2100th Anniversary of the Ponte Milvio Bridge.

Gaius Claudius Nero built the Ponte Milvio when he was consul of Rome in 206 BC as a commemoration of his defeat of the Carthaginians. The bridge was rebuilt many times since and it stands today as a critical commuter bridge in Rome.

While the Ponte Milvio is best known as the site of the famous battle between Constantine I and Maxentius in 312 that consolidated the rule of Constantine, who founded Constantinople, the capital of what became the Byzantine Empire, and who is best known for making Christianity the official religion of the Roman Empire.

Eugenio Drutti designed the winning coin. While the reverse is a fairly straightforward picture of the bridge, the obverse blends the ancient with the modern in an interesting way. The bridge and the ancient “SPQR” (The Senate and People of Rome) blend into the head of a young person as if to imply that the great history of Rome is a part of the mind of every modern Italian.

The coin was minted in proof and in mint state and made available through special sets. The Mint state version was placed in a capsule at the mint so it usually comes in MS65 or better. 59,000 coins were made and they are reasonably available in the market.

AWARDS

FOR COINS MINTED IN 1992
When judges voted the 500-Lire entry from Italy as the Coin of the Year, as well as Most Artistic Coin, it marked the first time that a county other than the United States won the competition two years in a row.

As of 2002 there were more than 400 species of mammals and birds and about 6,000 species of plants throughout Italy. Italy honored its plant and animal life by adding it to their commemorative coin series of 500-Lire silver coins.

The Italian countryside varies in elevation and climate, creating a home for a diverse plant and animal life. Flora is found above 7,500 feet in the Apennines and oak trees, chestnut trees, beach trees and conifers grow on the slopes. Mediterranean vegetation predominates on the bulk of the peninsula. Plant life along with a bird and some butterflies adorn the coin’s obverse juxtaposed against the head of woman.

The animal life is also varied. Bears and roe deer inhabit the Apennines and the Alps, while varied animal life inhabit the peninsula. The reverse of the coin shows a fish, a bird and a reptile indigenous to Italy but located at different elevations. Carmela Colaneri designed the coin using the square as if to portray a window to view the images on the obverse and reverse.

The mint state coins were sold in a folder describing the plant and animal life of Italy; 43,000 were sold. The proof coins were sold encapsulated and placed in a box with a descriptive leaflet; 6,300 were sold. Both of these coins are relatively available.

FOR COINS MINTED IN 1993
The 500 Franc gold Bicentennial of the Louvre with the reproduction of Leonardo da Vinci’s *Mona Lisa* on the obverse won the Best Gold Coin award as well as the Coin of the Year Award for coins dated 1993. France also won the Most Historically Significant Coin honor with its 1 Franc silver D-Day commemorative.

The *Mona Lisa* was part of a gold and silver miniseries celebrating the bicentennial of the Louvre. It was issued in both proof and mint state both in 1993 and again in 1994 as a proof-only issue. The other coins in the set reproduce the images of the *Venus de Milo*, the Delacroix’s *Liberty Guiding the People*, the *Samothrace Victory*, the *Marie-Marquerite* and the painting of *Napoleon Crowning Josephine as Empress*. Five-ounce gold proof-only coins of these designs were issued in 1993 and 1994 with a mintage of less than 100.

All of the coins in both the 100 Franc and 500 Franc denomination share a common reverse showing the facade of the Louvre along with Pei’s glass pyramid standing in front of it. The Louvre is the world’s largest museum and houses one of the most impressive art collections in history. The magnificent, baroque-style palace and museum — *LeMusée du Louvre* in French — sits along the banks of the Seine River in Paris. These coins were issued to commemorate the rich history of the museum since it was founded.

The gold coins were issued in both one ounce and five ounces carrying a denomination of 500 Francs. The one-ounce coins have a mintage of about 5,000 and the five-ounce coins have a mintage of less than 100. While the five-ounce coins rarely appear for sale, the silver 100 Franc coins are often seen in sets of six. The one-ounce gold 500 Franc coins, while not rare, appear infrequently as do their 100 Franc gold siblings.

FOR COINS MINTED IN 1994
The celebration of the 50th anniversary of the invasion of Normandy was the subject of the United Kingdom’s 50 Pence copper-nickel coin. It won Best Contemporary Event and Most Popular honors, as well as walking away with the top prize of Coin of the Year for coins dated 1994.

As stated in the leaflet that accompanies the coin:

*It was realized that an invasion was likely in the summer of 1944 but the exact date and location remained one of the best kept secrets of the War. Thus Operation Overlord, one of the most difficult military operations ever undertaken, was able to begin just after midnight on 6 June, 1944—in the first hour of the day that would forever be known as D-Day.*

*The allied invasion force filling the sea and sky and heading for Normandy on 6 June 1944 is vividly captured on this splendid commemorative coin. The design was created by award winning sculptor John Mills and was inspired by his boyhood recollections of that historic day. Looking up at the sky he saw it filled with distinctively marked planes and realized that the invasion of France was underway.*

John Mills is a past president of the Royal British Society of Sculptors and his monumental work appears throughout London. His more well known pieces include the National Firefighters Memorial in front of St. Paul’s Cathedral and the Monument to the Women of World War II near Whitehall.

While the committee considers the copper-nickel version of the coin as the award winner, the British Royal Mint issued this coin in a variety of options and offered as a single and in sets:

- KM#966 Copper Nickel in proof and mint state
- KM#966a, silver proof
- KM#966b, silver proof Piefort

FOR COINS MINTED IN 1995
Celebrating the 50th anniversary of the United Nations, Finland won Coin of the Year with a design by Reijo Paavilainen. The entry also won Best Silver Coin and Most Artistic Coin honors in the competition.

Several countries commemorated the 50th anniversary of the United Nations with coins. As it was, Finland issued two coins for this anniversary: a gold 2000 Markkaa and the silver 100 Markkaa. For Finland, the anniversary of the United Nations coincided with joining the European Union.

Paavilainen’s design depicts a stylized dove with olive branch on the obverse. Both the obverse and the reverse of the coin use straight lines with part of the central image breaking through. On the obverse, the dove’s wings are stylized to cut a line between the relief and the field. On the reverse, two straight lines forming a triangle against the edge of the coin separate the relief from the field. The curved branch breaks the line.

This coin exists in proof with a mintage of 3,000 and in uncirculated with a mintage of 40,000. The uncirculated version is relatively common and the proof comes up from time to time. Grades up to MS67 and Proof-68 can be expected. Higher grades are rare.

FOR COINS MINTED IN 1996
Bermuda’s first coin in the shape of a triangle, the Bermuda 60 Dollar gold coin depicting the Bermuda Triangle on the reverse, was selected as the Most Innovative Coin for design and received the Coin of the Year Award for coins dated 1996.

Known for centuries as the “Isle of Devils” because of the hazardous reefs, bad storms and tropical wildlife that makes uncommon sounds, Bermuda gave rise to a legend that its location causes mysterious disappearances. The first coin in a three-coin series honoring Bermuda’s maritime tradition depicts the islands of Bermuda. The coin was marketed and titled “Bermuda Triangle” because of the triangular planchet shape.

Robert Elderton’s design for the reverse of the coin depicts the discovery and mapping of the islands of Bermuda. The island chain is depicted in the style of a map. It is positioned between a compass rose and a sixteenth century Spanish Caravel in full sail. The Caravel was the style of ship that Christopher Columbus and the early Spanish explorers sailed when they originally discovered and charted the islands. A single rope with an overhand knot in each corner is used as a border separating the design from the legend on each side.

Although these coins are legal tender in Bermuda they were struck only in proof for collectors. While judges selected the 60 Dollar gold coin as the nominee, there are four denominations. The 30 Dollar gold coin is the most difficult to find. Nice examples of the 5-ounce 9 Dollar coin are also somewhat scarce.

- KM#92, 1996 Proof $3 silver ½ ounce (about 5,000 minted)
- KM#96, 1996 Proof $9 silver 5 ounce (about 1,000 minted)
- KM#97, 1996 Proof $30 gold ½ ounce (less than 1,000 minted)
- KM#93, 1996 Proof $60 gold 1 ounce (about 1500 minted)

FOR COINS MINTED IN 1997
COIN OF THE YEAR
South Africa, 1 Rand, Silver, Women of South Africa

South Africa won several awards for coins dated 1997. The 1 Rand gold, *First Heart Transplant* commemorative, won the award for Best Contemporary Event. The 1 Rand silver, *Women of South Africa*, won the Most Artistic Coin and went on to win the Coin of the Year.

By 1997, the plight of women in South Africa had been recognized by various human rights groups around the world. Writing on the subject, Waheeda Amien, Gender Convener at the legal aid clinic for the University of South Africa said, “Although women comprise 52% of the South African population, it has been acknowledged that they constitute one of the most marginalized and vulnerable groups in this country.”

The obverse design by A.L. Sutherland depicts the king protea, the national flower of South Africa, in full bloom. It is set in the center of the coin with clean fields on either side. The country name and date is above and below respectively. This design has since been used as the obverse of other 1 Rand coins of South Africa.

Susan Erasmus’ reverse design is an interesting frontal view of a woman’s face cracked by the South African countryside. Below is a lunar landscape. The earth and the moon blend together in the design. They form the coins relief along with the woman’s face suggesting mother earth flowing into sister moon. The word, “protea” creates a link to the flower on the reverse and identifies the coin’s South African focus.

As most coins of South Africa, this one is rare in any grade. In uncirculated, 3,312 were minted and 2,329 were minted in proof.

AWARDS

FOR COINS MINTED IN 1998
Austria won the Coin of the Year honor, as well as Best Silver Coin, for its 500 Schilling silver coin dated 1998 commemorating book printing. Austria also won the Best Trade Coin award for its 50 Schilling bi-metal celebrating the Austrian president of the European Union.

The reverse of the Coin of the Year designed by Thomas Pesendorfer shows an interior view of Adimont Abbey Library. Perhaps it was chosen because it houses the largest collection of manuscripts copied by medieval monks in the world. Located at the site of former Benedictine monastery, the main hall was built in 1776 and became the largest library in the world at the time.

The artist’s choice to use the interior design of the main hall on the reverse brings together the history of printing by blending the collection of medieval manuscripts on the shelves with the enlightenment style of architecture. The floor space creates a field for the country name, denomination and date.

The obverse designed by Herbert Wahner shows printers at work. Austria has a claim to being the origin of movable type printing allowing books to be mass-produced in the early Renaissance. Arguably the world’s most famous printer was German-born Johannes Gutenberg, who is credited with printing the world’s first book using movable type and ushering in the age of mass communication.

Austria minted this coin for circulation as well as for collectors. The circulation strike with a mintage of 68,000 is most commonly found in grades below MS65. Higher grade uncirculated specimens most likely came from the special uncirculated strike made for collectors and sold in capsules from the Mint. 40,000 proof coins were minted and these typically come in high grades averaging Proof-67. They were sold in official mint boxes.

FOR COINS MINTED IN 1999
While both the United Kingdom and the United States had two coins winning in categories this year, it was Italy’s World Encircled by Birds and Stars coin for the new millennium that won the Coin of the Year. This was the third time Italy won the high prize.

Laura Cretara’s obverse design depicts a globe with latitude and longitude markings. It is circled by an elliptical halo of stars with three birds flying along its path. The ellipse separates the central design from the country name and date along the edge. The earth is in high relief.

The reverse depicts wheels and a satellite dish. The wheel is both a form of transportation and communication. The design depicts a wagon wheel, a ship’s steering wheel and a concave satellite dish. The placement of the satellite dish in this image shows the evolution of the wheel in the last millennium. Three bands with stylized ground, ocean and stars complement the three wheels.

Italy used the obverse of this coin design again for the 10,000 Lira silver new millennium coin in 2000. It was paired with a new reverse that depicts Leonardo Da Vinci’s wing and airplane design. Between 1999 and 2002 Italy was still using the Lira even though it had switched to the Euro.

This coin is not particularly hard to find and comes in grades averaging MS65 or Proof-67. There were 37,600 mint state coins minted and sold with an information card. There were 8170 proof coins made. They were also sold in sets with 5000 Lira Birds Sprouting from Globe design, KM#197, minted that year.

FOR COINS MINTED IN 2000
COIN OF THE YEAR

*United States, 1 Dollar, Silver, Voyage of Leif Ericson*

The United States received the award for Most Historically Significant Coin and, for the first time since the 1986 *Centennial of the Statue of Liberty* gold $5 coin, the Coin of the Year for coins dated 2000.

John Mercanti designed the portrait of a helmeted Viking voyager. In the absence of any portraits of Leif Ericson, Mercanti conceived of a generic Nordic face with long hair protruding from the helmut, a beard and a bushy mustache and eyebrows. The portrait looks a lot like a crusty New England sailing captain, which might have been the Mercanti’s intention.

T. James Ferrell designed the reverse design depicting a Viking ship under sail. The image is the best guess at the type of ship that Leif Ericson might have used around the time he landed on what was probably the northern tip of Newfoundland in 1000 A.D.

This is the first time the United States Mint worked collaboratively with a foreign mint to market a product. Iceland issued a 1000 Kroner silver coin honoring Leif Ericson the same year. Throstur Magnusson’s design depicts his interpretation of the Stirling Calder statue of Leif Ericson on the obverse and a stylized drawing of the Icelandic Coat of Arms on the reverse. The Calder statue was a gift by the United States to the people of Iceland in 1930 to commemorate the millennium of the Iceland Parliament.

As all United States commemorative coins, this coin was authorized by the Congress of the United States as Public Law: 106-126 with high mintage limits of 500,000 which was not reached. This coin is easily obtainable in grades of MS68 and MS69, while grades of MS70 coins exist. The Proof coins in a Proof-70 grade are extremely rare, but it is not hard to find them in Proof-69. They were minted at the Philadelphia Mint and bear the “P” mintmark.

AWARDS
FOR COINS MINTED IN 2001
The 2003 Coin of the Year awards proved a grand going away party for the Franc. France’s salute to its national currency won both the Coin of the Year and Most Innovative Coin for coins dated 2001.

The name of the French currency unit 2001 was derived from the Latin inscription, “Francorum rex” that appeared on a gold coin of King John II in 1360. It became the national currency in 1795. When France switched to the Euro, the 1 Euro coin was valued at 6.5 Francs. The Franc was demonetized on February 28, 2002. This coin was issued just a few months earlier on September 1, 2001.

To commemorate the end of a long run of coins the Paris Mint worked with Philippe Starck to design a coin in the shape of a wave or discarded planchet found in the Mint’s reject bin. The obverse bears a number “1” with the serif edges cut off by the rim. The reverse bears only the inscription, “un ultime franc” the “c” in franc only partly appearing. The date, country and motto are inscribed faintly on the rim.

Although this coin was never intended for circulation, it was a fitting tribute to the end of an era in French coinage. By 2001 more than 36 countries used the Franc as the denomination of their country’s coinage.

Paris Mint officials were stunned by the success of this coin. 49,838 were minted. The coin was also issued in gold with a mintage of 4,963. Both the silver and gold coins are readily available in grades of MS66 to MS68.

2004 AWARDS
FOR COINS MINTED IN 2002
Austria’s 5 Euro coin, commemorating the 250th anniversary of the Schoenbrunn Zoo, earned both the Coin of the Year and Most Popular Coin for coins dated 2002.

The Schoenbrunn Zoo is the oldest continuously operated zoo in the world. It was founded by Empress Maria Theresa and her husband Franz Stephan Von Lothringen in a park in Schoenbrunn and originally consisted of 12 animal enclosures, a pond and two farmyards. After the central pavilion and the wall were erected, animals were brought to the zoo and it opened to the public in the summer of 1752.

Helmut Andexlinger’s reverse design shows the pavilion surrounded by some of the zoo animals. The pavilion is in the center of the coin with the commemorative inscription above and the anniversary dates below.

The nine points of the coin symbolize the nine federal provinces of Austria. Herbert Wahner uses these nine points of his sun with rays design. The connection between the coin’s design and shape adds power to the symbolism of unity, history and enlightenment. The coats of arms of each of the nine provinces between the slopes of the star points encircle the denomination. Wahner’s obverse design on a nine-sided planchet has been used as the standard obverse on 5 Euro commemorative coins ever since.

These coins were sold in capsules and in a blister pack with a description of the coin with a mintage of 100,000. More were sold at the gift shop in the zoo. These were offered in four different packages, each showing a different zoo animal. 500,000 were struck making this coin quite common.

2005 AWARDS FOR COINS MINTED IN 2003
Belarus took the award for Best Crown Coin with its 20 Rouble, *Mute Swan*, and for Most Artistic Coin with the 100 Rouble, Belarus Ballet. The 100 Rouble earned Coin of the Year for coins dated 2003. It was the second time that a five-ounce silver coin won top honors. Svetlana Zaskevich, an artist at the National Bank of Belarus, designed this coin and it was minted at the Lithuanian Mint for the Republic of Belarus.

The obverse depicts the National Academic Bolshoi Opera and Ballet Theater of the Republic of Belarus. Above it is the state coat of arms with the inscription, “Republic of Belarus.” The face value of the coin is written in script at the bottom of the obverse under the year.

The reverse is a scene from the national ballet, *Passions*, by Andrey Mdivani and the inscription in two lines, “Ballet Belarusian.” Two dancers glide across the proof surface of the coin reaching the edge as if to fall gracefully off the coin’s surface. The dancers embrace and look into each other’s eyes with delicate facial expressions.

Unlike many of the 100 Rouble five-ounce coins of Belarus, no 20 Rouble equivalent of this coin exists. With the low proof mintage of 1,000, this is one of the rarest coins to receive the Coin of the Year award. As a result of the demand for this coin after it received the Award, the reverse design was used again beginning in 2006 for other gold coins of Belarus in denominations of 10, 200 and 1000 Roubles.

2006 AWARDS

FOR COINS MINTED IN 2004
Italy won the Coin of the Year Award for the fourth time in 2006. The 5 Euro *Madame Butterfly* won the award for Most Artistic Coin and then went on to win the top honor for coins dated 2004.

Italy celebrated the 100th anniversary of the first performance of Giacomo Puccini’s opera, “Madame Butterfly,” by issuing two coins, a 5 Euro and a 10 Euro. In earning the top honor for the fourth time, Italy tied the United States for winning the most Coin of the Year awards.

Luciana de Simoni designed the coin. The obverse of the 5 Euro coin depicts the La Scala opera house in Milan where “Madame Butterfly” was initially performed in 1904. An encircled bird is perched on a branch above the opera house unifying the obverse and reverse with the attached foliage.

The reverse depicts an image of Madame Butterfly while waiting in her home in Japan for her American husband to return. This image, which may have been taken from the statue next to the statue of Puccini in Milan, or it may be the artist’s representation of Rosina Storchio, the first soprano to play the part of Madame Butterfly in 1904.

These coins were sold in a set with the 10 Euro Puccini coin in both proof and uncirculated with 12,000 proof coins minted. They were sold singly and in sets with the 10 Euro of Giacomo Puccini. 30,000 mint state coins were made. Proof and uncirculated specimens are not difficult to find.

FOR COINS MINTED IN 2005
COIN OF THE YEAR
United States, 1 Dollar, Silver, *U.S. Marine Corps*

The United States Silver 1 Dollar salute to the Marine Corps won the Best Crown for coins dated 2005. It marched off with the Coin of the Year award as well, marking the fifth time the United States won high honors and in the process surpassing Italy as the country with the most top awards.

Funds from the sale of the Marine Corps 230th Anniversary silver dollars benefited the Marine Corps heritage foundation and helped to construct the national museum of the Marine Corps in Quantico, Virginia.

Norman E. Nemeth designed the obverse of the coin. The chosen design copies a photograph by Joe Rosenthal of the United States Marines raising the American flag on Iwo Jima in 1943. In addition to the inscription, “Marines 1775-2005,” the obverse contains two mottoes required by law on all United States coins, “In God We Trust,” and “Liberty.”

The denomination, name of the country and the other third legend required by law to appear on all United States Coins, “E. Pluribus Unum” were inscribed on Charles L. Vickers’ reverse design. It features an engraving of an eagle, globe and anchor, the official emblem of the United States Marine Corps.

The commemorative was minted at the Philadelphia Mint in both uncirculated and proof. All 600,000 coins were sold. Because of the high mintage and the care taken to strike these coins at the Mint, they are readily available in high grades of MS69, Proof-69 and better.

2008 AWARDS

FOR COINS MINTED IN 2006
For the first time in the history of the Coin of the Year Award, the winner for coins dated 2006 went to a four-coin set. While this had not been the first time a coin in a set was selected, it is the first time the committee of judges selected a complete set of coins.

The four palladium coins won in the Most Innovative Coin category because of the use of a special laser effect. The judges nominated the four-coin set because the total vision for the coins requires them to be viewed together. The coins illustrate the unique location of Canada’s capital where the constellations Ursa Major (big bear) and Ursa Minor (little bear) never disappear from the night sky. They just change locations.

Colin Mayne designed the coins to show the movement of the constellations in the spring, summer, fall and winter. The perspective of the viewer does not change. The landscape on the bottom third of each coin is the same. The four coins viewed together show the complete circle of the constellations in the sky over the course of a single year.

Each coin contains one ounce of palladium. With fewer than 300 specimen coins minted for each of the four coins in this set, it is the rarest and most expensive set of coins to receive the Krause Coin of the Year Award. These coins are seldom, if ever, offered for sale so even when the price of palladium retreats from its current high levels, this set is likely to remain pricy. The set was packaged in a maroon clamshell case lined with flock and protected by a black beauty box.

Hungary, 50 Forint, Cupronickel, 50th Anniversary of the Hungarian Revolution Against Soviet Occupation
Mongolia won the award for Best Silver Coin with the 500 Tugrik Wolverine which was ultimately selected Coin of the Year for coins dated 2007.

The first coin in Mongolia’s new Wildlife Series of coins featured an animal on the endangered species list, the wolverine. The National Bank of Mongolia hired CIT to develop, manufacture and sell the coins in the series.

Known for its innovative coin designs, CIT took the challenge to present animals in a new and modern way for the Mongolian series. The wolverine is sculpted to appear as if it is squeezing its way through the rim of a bottle. The rim of the coin is used as a design element to constrain the wolf’s face and neck. The high relief enhances the effect.

In order to show the penetrating eyes of the wolf, the artist used crystallized Swarovski inserts that shine light and make the wolf’s eyes glisten. The antique finish on the silver deadens the reflectivity of the metal and focuses the viewer’s attention on the animal’s eyes.

While a mintage of 2,500 is low, the popularity of these coins among collectors has created significant demand. This coin is not likely to be found for less than five times its original issue price. The coins were sold in capsules with an information leaflet. Grading services do not place this coin in a holder due to the crystallized Swarovski insert.

2010 AWARDS

FOR COINS MINTED IN 2008
The nominators at Krause broke with tradition to nominate the Latvia 20 Lati as a candidate for Best Gold Coin. It won the category award and went on to win the Coin of the Year award for coins dated 2008.

Krause judges have generally refused to consider reproductions of unused coin designs from the past. This coin design for a 1922 coin by Teodors Zajkalns was kept at the Latvian National Museum of History as a plaster model. It was never struck. The coin model was finally used in 2008 to celebrate the 15th anniversary of the renewal of the Lats currency following Latvian independence from the Soviet Union.

Zajkalns’ obverse portrait of a woman was modeled after an unnamed refugee during World War I. The woman wears a headscarf, signifying motherhood in the Latvian tradition. One of the loose ends of the scarf is tied in a knot because it is said that it helps one remember and that if tied when a star is fallen and a wish is made, the wish will come true.

The narrative from coin’s accompanying leaflet explains the symbolism of the reverse as follows:

_The feminine principle gives life to an individual and likewise is at the core of the family and state. The feminine principle unites the spiritual with the material; the symbols on the reverse of the coin, bread, apple, vessel with a curdled milk beverage and a jug of milk, also signify fertility and plentitude. A knife, symbolizing masculine action, is placed next to the feminine images._

Only 5,000 of these coins were minted at the Austrian Mint on behalf of the Bank of Latvia. While they are not rare, grades above MS67 are scarce.

2011 AWARDS

FOR COINS MINTED IN 2009
The South Africa 100 Rand *White Rhino* coin won the award for Best Gold Coin and then went on to win the Coin of the Year for coins dated 2009, marking the second time South Africa won the highest honor.

South Africa’s gold bullion coin series began its new theme “Safari through South Africa” in 2009 by featuring the white rhinoceros on the “Save the Rhino” project. The white rhino is an endangered species with fewer than 18,000 surviving in the wild. Not more than 100 years earlier fewer than 18 white rhino’s remained in existence.

Natanya van Niekerk designed this coin with a strong animal conservation theme. The coin’s obverse features a rhino peeking through a silhouette of itself. On the reverse, the animal boldly stomps through its own shadow as if defying extinction. Niekerk blends the country name and denomination into the animal habitat design of fields.

Four denominations with different designs—100 Rand, 50 Rand, 20 Rand and 10 Rand—were issued depicting the white rhino on the obverse and a scene in the life of the rhino on the reverse. They were sold separately, but 400 numbered box sets containing all four denominations were sold along with a silver Rhino figure made exclusively for the box set by Stephen Sutherland.

The coin comes both with and without a privy mark. The coins marked, “EWT” (Endangered Wildlife Trust) are extremely rare with a mintage of only 300. Because of the way they were handled, grades above Proof-63 are rare for coins with the privy mark.

COIN OF THE YEAR
Israel, 2 New Sheqalim, Silver, *Jonah in the Whale*

Israel won the Most Artistic Coin Award with its 2 New Sheqalim depicting Jonah in the whale. This striking silver coin went on the win the Coin of the Year for coins dated 2010.

The reverse design by Gideon Keich depicts a whale in relief. Opposite is a proof field. The figure of Jonah with outstretched arms praying for forgiveness is incuse in the belly of the whale from which he rises after three days. Depending on how you view the coin, you can see either a wave engulfing Jonah or a whale with Jonah in its belly. The synergy of the optical illusion suggests a “yin yang” interpretation to the biblical story of Jonah.

Aharon Shevo’s obverse design shows the denomination in the center encircled by the bible passage, Jonah 2:1, “Jonah in the belly of the fish,” in Hebrew, English and Arabic. At the bottom is a small figure of Jonah in prayer and supplication. The proof 2 New Sheqalim coin bears mintmark, “mem” in Hebrew below the denomination.

Only 2,800 of the 2 New Sheqalim coins were minted, but this coin is available in high grades because of the care taken by the mint in coining and packaging them. The same design appears on a 1 New Sheqel, which is also available in Mint State with the Star of David mintmark. A gold 10 New Sheqalim was also made. These coins were sold as sets in limited quantities.

COIN OF THE YEAR
Royal Dutch Mint, 5 Euro, Silver, 100th Anniversary of the Dutch Mint

Netherlands took the prize for Most Innovative Coin and the prestigious Coin of the Year for coins dated 2011 with its 5 Euro commemorative for the centennial of the Utrecht Mint building. This is the first coin to have a working QR barcode in the design.

Juan Jose Sanches Sastano designed the coin with a two dimensional QR barcode. When a mobile devise equipped with a barcode reader scans the barcode on the coin it takes you to a website with information about the Mint you can read on your device. The bar code sits on top of a screw press, the first mechanical device used to strike coins after they stopped hammering them.

The web page that the QR code used contained a video and a button to a memory coin game. The content of the website can change. For the initial issuance of the coin, proving that the QR code could be used was point enough. The obverse portrait of Queen Beatrix is in the new, modern style with computer modeling and lazar application at the Royal Dutch Mint.

Silver plated copper-nickel coins were sold on cards containing an information booklet about the coin and the mint. Proof coins with a mintage of 12,000 were sold in capsules attached to a blister pack. A 10 Euro gold coin with the same design was also made with a mintage of 3,500 and sold in a wood box. They are not difficult to obtain except in grades over Proof-65.

COIN OF THE YEAR
France, 10 Euro, Silver, Yves Klein

For the first time in the history of the Krause Coin of the Year Award, top honors went to a coin with coloring. The French 10 Euro coin commemorating Yves Klein won the award for Most Artistic Coin and was selected by the judges as the Coin of the Year for coins dated 2012.

This was the fourth time France won the Coin of the Year Award tying with Italy as the second most honored country. France also won the award for Best Silver Coin for coins dated 2012 with the 10 Euro SS France Ocean Liner, Le France.

Yves Klein (1928-1962) is regarded as one of the most important French artists of the modern era. In 1960 he was among those who founded *Nouveau Realisme*, France’s response to the American pop art movement. Klein was also a leader in body art and an early influence in performance art. Klein created a recipe for “International Klein Blue” which became his signature color.

The obverse design shows the bow-tied Klein with his outstretched hand drenched in International Klein Blue. His eyes are penetrating. The color on Klein’s hand is an integral part of the coin design. The reverse is a rendition of one of Klein’s paintings.

The Paris Mint made this coin in several denominations in both gold and silver. There is a 10-ounce proof silver 100 Euro coin with a mintage of 500; a 5-ounce silver proof 50 Euro coin with a mintage of 500; a 5-ounce gold 500 Euro weighing 5 ounces with a mintage of 99; and a ¼ ounce 50 Euro gold coin with a mintage of 1,000. The 10 Euro silver proof Coin of the Year award winner has a mintage of 30,000 and is not difficult to obtain.

FOR COINS MINTED IN 2013
The Austrian Mint won three of the ten categories for coins dated 2013, including the prestigious Coin of the Year for the 50 Euro gold coin, “Klimt & His Women, The Expectation.” The spectacular coin celebrating the work of famed artist Gustav Klimt, also won the “Best Gold” category. A 100 Euro gold coin, KM-3225, depicting a Red Deer as part of the Austrian Wildlife series won the “Most Artistic” category. A 25 Euro silver and niobium coin, KM-321, depicting the theme of tunneling won in the “Best Bi-metallic” category.

The 50 Euro gold Klimt, the second in a five coin series celebrating the important artist depicts his painting, “The Expectation” on the reverse.

The reverse, designed by mint engraver Herbert Waehner, depicts a Klimt painting of the face of a young dancer yearning for love. Her hand is held in a pose reminiscent of Egyptian paintings. The letter “L” in the right field is the second letter of Klimt’s name which all five gold coins spell when they are assembled.

The obverse design by chief engraver Thomas Pesendorfer, features the “Tree of Life” from the Stoclet dining room in Brussels commissioned to Klimt. His tree bears both flowers and fruit symbolizing man and woman together and on their own. To the right, the image of a falcon interprets the Eye of Horus in the manner of Klimt.

This is the second time Klimt has been honored as a subject for the Coin of the Year award. In 2003, Austria’s 100 Euro depicting Klimt’s, “The Kiss,” KM-3108, won “Best Gold.”

The 50 Euro gold is 22mm, 10 grams gold, struck in proof only with a mintage of 30,000. Grades in Proof 69 should be readily available. Each coin is sold in a box with a numbered certificate. A wood collection case is available for the five coin series.
